This is a lateral radiograph (X-ray) of a horse's lower leg and hoof. The image shows the distal radius and ulna at the top, followed by the cannon bone (metacarpal III). Below the cannon bone is the fetlock joint, then the pastern bone, and finally the hoof wall and sole. A white crosshair is visible in the lower center of the image, likely a reference marker. The text 'AD/RF' is printed in white on a black background in the upper right corner.

This is an anteroposterior (AP) radiograph of a canine knee joint. The image shows the distal femur at the top and the proximal tibia below it. A total knee replacement is visible, consisting of two large, light-colored, roughly oval-shaped components on the femoral condyles and a central, V-shaped component on the tibial plateau. The surrounding soft tissue and bone structure are visible in shades of gray against a black background.
